DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the synthesizer performs the time averaging, an AND or an OR operation must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1 – 40 are allowable over the prior art of record.

The following is a statement of reasons for the indication of allowable subject matter: Prior art of record failed to teach a differential phase detection device having a slicer, a first synthesizer for synthesizing the first digitized signal and the third digitized signal to generate a first synthesized signal, a second synthesizer for synthesizing the second digitized signal and the fourth digitized signal to generate a second synthesized signal, a phase difference detector for comparing the phases of first synthesized signal and second synthesized signal and generate first and second phase difference signals, and a matrix circuit to determine a difference between the first and second phase difference signals and output the differential phase signal.

This application is in condition for allowance except for the following formal matters:

This application is in condition for allowance except for the objections explained in the above paragraph..

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
